

Appendix C — Standard Worker Agent Interface

Every Worker Agent must implement the following interface.

Required Metadata

- Agent Name
 - Version
 - Description
 - Author
 - Supported Tasks
 - Required Permissions
-

Required Methods

```
initialize()

validate_request(request)

execute(request)

cleanup()

health_check()
```

Required Status Values

- SUCCESS
 - FAILED
 - PARTIAL_SUCCESS
 - WAITING_FOR_APPROVAL
 - CANCELLED
-

Agent Lifecycle

```
Register

↓
```

Initialize

↓

Idle

Idle

Design Rules

Every Worker Agent:

- Has one responsibility.
- Is independently testable.
- Does not access the database directly.
- Does not communicate with other Worker Agents.
- Uses the Memory Service for persistence.
- Returns standardized responses.
- Implements health checks.
- Declares permissions.
