

Appendix D — Glossary & Definitions

Term	Definition
AI OS	The complete AI Operating System.
Jarvis	Strategic AI personality responsible for planning and reasoning.
Friday	Operational AI personality responsible for execution and productivity.
Router	Determines whether a request goes to Jarvis or Friday.
Agent Manager	Coordinates Worker Agents and workflows.
Worker Agent	A specialized module responsible for one domain.
Memory Service	Centralized service for storing and retrieving persistent information.
Event	A record describing something that happened inside AI OS.
Workflow	A sequence of one or more Worker Agent executions.
Plugin	An independently loadable extension that follows the Plugin Architecture.
Permission	Authorization required before performing an action.
Human Approval	Explicit user confirmation required for sensitive operations.
Model Manager	Core Service responsible for selecting and managing AI models.
Configuration Service	Manages runtime settings, feature flags, and environment configuration.
Persistence Layer	Handles long-term storage of data.
Core Service	Shared infrastructure used throughout AI OS.
Architecture.md	The authoritative technical specification of AI OS.
